

THE SCIENCE BEHIND GREAT CARE

SCIENTIFIC

Your expectations create the challenges that inspire the Blatchford Private Clinic team. Our specialist rehabilitation experts will discuss your individual treatment plan with you, adding scientific analysis into the mix, to best enhance your busy lifestyle.

TREATMENT

There will be time in your assessment for your clinician to listen to your history and consider current and future needs. The best available technologies from around the globe will ensure you have the ideal match for today's needs and tomorrow's aims.

EXPERTISE

Our clinicians are selected for their expertise in treating the most complex cases; many have experience in dealing with military injuries. They will do their utmost to understand your needs and to focus the treatment on the details that matter to you.

LOCATIONS

Blatchford Private Clinics are based nationally. We have a selection of clinics with analytical tools for gait and kinematic analysis and smaller clinics for one to one assessments. We will provide the most suitable choice of location for your treatment.

VISITING OUR CLINICS

We will give you plenty of time with your clinician to discuss your needs. In the early stages we will use a number of data gathering tools to get an accurate picture of your current status. We believe that our clients and clinicians benefit most from having the time to carefully plan treatment and develop the right options for a happy and successful result.

PROSTHETICS

The most critical element in any prosthesis is the fit and comfort of the socket interface with the body. Our Prosthetists have specialist training in socket design and keep up to date with developments in shape and liner technology for the best possible fit. Component choice will promote excellent safety, comfort and functionality and include the best international component selections so you can get on with the activities you wish to do. Cosmetic finishing can be simple, if you like to keep the technology on view, or very lifelike should you prefer matched colour tones and skin detail.

ORTHOTICS

Blatchford Private Clinics cover the range of orthotic treatments from paediatrics right through to people with sports injuries, arthritic or diabetic pathologies. We supply footwear and insoles, made to measure orthotic bracing, spinal supports and cranial re-shaping. To ensure excellent fitting results, clinicians have direct access to the manufacturing process to tailor the devices perfectly for comfort, function, style and fit. Our Orthotists have continuous training to keep up to date on developments and access to the latest, most effective scientific treatments.

SEATING

Blatchford is at the forefront in the field of Specialist Seating. Our multi-disciplinary approach keeps the patient and family at the centre of the discussion to ensure input on orthopaedic, communication and functional needs. These team meetings allow considerations for home, transport and day to day environment so that the seating can be minimised, yet allow the best mobility in all areas of the community. Our seating devices are designed to show the person, not the chair. We also supply wheelchairs for work, leisure and sports activities.

MEDICO-LEGAL

We offer a full assessment, independent medical reports and rehabilitation services to assist the resolution of personal injury claims. Our clinicians are specialised in dealing with the most complex cases resulting from serious accident, clinical negligence, trauma and conflict. All have worked in the NHS and private clinic sector and with military casualties. They are experienced in medico-legal reporting.
